Plan Cycle within the Project Management Method:

03/09/2018 at 11am-11:50am
Present: Erik, Salome, Mel, Giordan, Hao

Questions:
1) What did you do before this meeting
2) What are you doing after this meeting
3) What has been a challenge/obstacle

Erik:
1) Database for login and user info
   Started working on front end and back end integration
2) Get login form working/tested
3) Not knowing how to test anything

Salome:
1) Front end web pages: Match Page and Homepage
2) Front end: user/login page, new user page
3) Lack of front end/Back end integration foundation

Mel:
1) Database SQL file for chat logs
2) Testing the database
3) Not knowing a lot about SQL

Giordan:
1) Project Management Tool - Trello
2) Helping with Front End Aesthetics
3) Understanding Integration

Hao:
1) Researched Front End and Back End
2) Basic Framework of Front End Back Integration
3) No foundation of Front End and Back End

Sprint Retrospective:
Overall, the biggest hurdle seems to be lack of knowledge of how to use the software and how to test it. We plan to use our resources such as the TA, the w3schools website, other online resources. As of now, most of the framework has been accomplished for front end and back end. We are currently working on integrating the front end and back end.

What went well during this sprint is the project management tool, Trello, was actually used! Mel used the Trello! In addition, all tasks that were assigned were done. We are on schedule! What did not go as well is communication. Previously we used slack as a method of communication. To improve this, we plan on moving communication to texting because it is a faster method of communication. What can go better is sharing the work. This week more specific tasks were delegated out.

The overall scrum process provided a systematic method to identify what each person was working on and what he/she would continue working on. Overall - we liked it!
